Learning objectives for this lecture unit

Ansys software mentioned	•	Ansys Granta EduPack [™] , a teaching software for materials education
--------------------------	---	---

	Intended Learning Outcomes
Knowledge and Understanding	Knowledge about the Advanced Databases
Skills and Abilities	Ability to find advanced material properties and use them in a structured way alongside advanced tools
Values and Attitudes	Appreciation of the complexity of advanced industrial applications

Resources

- White Papers: White Papers describing databases available via the <u>Ansys Education Resources</u> webpage
- Software: <u>Ansys Granta EduPack</u>
- A number of Advanced Industrial Case Studies available via the <u>Ansys Education Resources</u> webpage

Outline of the lecture unit

- Available databases and tools
- The advanced level
- Database overview and subsets
- External and temperature dependent data
- Sustainability
- Advanced Ansys Granta EduPack software tools and capabilities
- Advanced Industrial Case Studies

What Databases do you have?

Level 3 Standard database

Data:

- Material Universe
 - More than 4,200 Materials and 240 Process records
 - More than 60 engineering properties for each
- Around 100 records for automotive alloys
 - Aluminum alloys (2008.2036, 5182, 6111)
 - Magnesium alloys (AE44, AM60, AS41)
 - High-strength steels (Dual phase/HSLA/Mn-B)
 - Automotive composites (Polyester and Polyamide matrix)

Standard Level 3 EduPackTools:

Materials selection tools

EDUCATION RESOURCES

Eco Audit Tool

GRANTA EDUPACK

Subsets

Level 3 Bioengineering database

Data:

- Additional biological materials and data (4200+ materials and 240+ processes total)
- Data for Medical grades, Medical trade-names, and Sterilizability
- Link to ASM Medical Materials online data
 - Biomedical response data with medical device application information (Orthopaedic, Cardiovascular, Neurological)
- Bio-related subsets
 - Biological, Natural and Biological materials, Bioderived, Bio-polymers, Bio-medical, Bioceramics
- Information on Medical devices, including over 100 FDA examples linked to relevant materials

Granta EduPack Polymer Database structure

Using the Polymer modules

MaterialUniverse

Designed for primary, broad materials selection. Enables generic candidates (resin and filler type) to be easily identified.

Global Polymers Plastics

Once the resin and filler type are known these can be used to find specific commercial grades and possible vendors.

/\nsys

Level 3 Aerospace database

Data:

- Materials Data Tables (Material Universe)
 - Additional 'Aerospace Materials' subset with 950+ records with many showing temperature dependent mechanical properties from the MMPDS database
- MMPDS Metals (formerly MIL-HDBK-5) 2500+ records of statistically-derived design data for aerospace alloys, temperature dependent properties, fatigue curves, and corrosion rankings.
- *MIL-HDBK-17* Composites 950+ records of test data for polymer matrix, metal matrix, and ceramic matrix composites.

Granta EduPack Aerospace database structure

Materials Universe – Aerospace subset

Each material in the Aerospace subset links to the MMPDS (metals) or MIL-HDBK-17 (composites) tables.

Each record has all the attributes of the 'All bulk materials' subset, as well as additional temperature dependant functional data.

It allows materials comparisons and selection on a database with no holes.

Examples of additional data

Recycling and end of life						
Recycle	i	√				
Functional recycle	í	√				
Climate change (CO2-eq), recycling	í	* 1.22	-	1.34	kg/kg	
Embodied energy, recycling	í	* 15.5	-	17.1	MJ/kg	
Recycle fraction in current supply	í	28			%	
Combust for energy recovery	í	×				
Landfill	i	√				
Biodegrade	í	×				

Possible substitutes for principal component 🔅

Aluminum substitutes for copper in various products, such as electrical power cables, electrical equipment, automobile radiators, and cooling/refrigeration tubing. Titanium and steel are used in heat exchangers, and steel is used for artillery shell casings. Optical fiber substitutes for copper in some telecommunications applications. Plastics also substitute for copper in water pipe, plumbing fixtures, and many structural applications.

Geo-economic data for principal component

Principal component	i	Copper			
Typical exploited ore grade	í	2.52	-	2.78	96
Minimum economic ore grade	i	0.3	-	5	96
Abundance in Earth's crust	i	27	-	70	ppm
Abundance in seawater	i	2e-4	-	0.003	ppm
Annual world production, principal component	i	1.85e7			tonne/yr
Reserves, principal component	i	6.9e8			tonne
Main mining or production areas 🕕					
Chile, 28% Peru, 12% China, 8% Congo, 6% Zambia, 6% Australia, 5% Russia, 4% United States, 4% Mexico, 4% Canada, 3% Kazakhstan, 3% Poland, 2% Other countries, 15%					

Healthcare & food		
Food contact	i	Conditional
Notes		
Copper alloys can only be used with food if the pH is higher than 6.		
Restricted substances risk indicators		
RoHS 2 (EU) compliant grades?	i	✓
EU REACH Candidate List indicator (0-1, 1 = high risk)	i	0
SIN List indicator (0-1, 1 = high risk)	í	0
Critical materials risk		
Contains >5wt% critical elements?	i	Yes
Contains >5wt% critical elements?	í	Yes
